DETAILED ACTION

1. Claims 1, 2, 4, 5, 7-9, 11, 14-16, 19, 21-25 are allowable. Claims 3, 6, 10, 12, 13, 18 and 20, previously withdrawn from consideration as a result of a restriction requirement, require all the limitations of the allowable claims. Pursuant to the procedures set forth in MPEP § 821.04(a), **the restriction requirement among inventions species, as set forth in the Office action mailed on July 21, 2008, is hereby withdrawn** and claims 3, 6, 10, 12, 13, 18 and 20 are hereby rejoined and fully examined for patentability under 37 CFR 1.104. In view of the withdrawal of the restriction requirement, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

2. The following is an examiner's statement of reasons for allowance:

Applicant's filing of a translation of the application's Foreign Priority document has invalidated the use of Lacan et al (U.S. Patent Publication No. 2003/0049370) as a prior art reference thus overcoming the 103(a) rejection set forth in the previous Office Action.

Furthermore, as was discussed in the previous Office Action, Souel (U.S. Patent # 6,281,468) teaches a method of marking the face of an ophthalmic lens (Column 1 Lines 6-10) wherein a low surface energy hydrophobic layer has been deposited over a high surface energy

Art Unit: 1712

coating or the lens substrate (Column 3 Lines 7-25). The taught method involves positioning a mask having a configuration complementary to a required mark between the face of the lens to be marked and energizing discharge source in the form of a corona discharge (Column 2 Lines 7-24 and 46-50) and the source eliminates substantially the outermost low surface energy layer in order to reveal the substrate or underlying coating (Column 3 Lines 39-46).

However, Souel does not fairly teach or suggestion that prior to marking of the outermost surface of the lens a temporary coating having a thickness of less than about 5 nm is deposited onto the outermost surface of the lens and wherein the energizing source which marks the outermost surface of the lens acts through the temporary layer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Wieczorek whose telephone number is (571)270-5341. The examiner can normally be reached on Monday through Friday; 6:00 AM to 3:30 PM (EST).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Cleveland can be reached on (571)272-1418. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
